

VESystems and MnPASS Sign Five Year HOT Lane Support Contract

Irvine, CA (July 2010)

VESystems is pleased to announce the signing of a new VTX software support and maintenance contract with the Minnesota Department of Transportation MnPASS program. The contract will extend VESystems' back office software support for Minnesota's I-394 and I-35W HOT lanes through June 2015.

MnPASS licensed VESystems' VTX back office software for its I-394 HOT lanes in 2004, the first in the United States to use an innovative automated dynamic pricing strategy to manage traffic congestion. The program expanded onto I-35W in 2009.
